Rama Sathya Sai

Full Stack Software Engineer

Bengaluru, Karnataka, India • +91 93980 36558 • founder@journeymen.in • Portfolio • Journeymen • GitHub • LinkedIn

SUMMARY

Full-stack software engineer who builds systems that verify real engineering work instead of relying on credentials alone. Creator of Journeymen, a platform that evaluates GitHub activity to generate server-backed developer certifications, and Emporos, a live options trading desk guarded by a sixteen-rule risk engine. Comfortable across the stack: Python/Flask and Node.js services, React/Next.js frontends, AWS serverless infrastructure, and applied LLM systems.

EXPERIENCE

Full Stack Engineer · Sukoon Unlimited — Bengaluru, Karnataka, India — April 2024 – April 2025

- Built back_bone, the platform backend for an agetech startup, as a Flask-RESTful API on AWS Lambda and API Gateway with 83 endpoints covering users, experts, calls, payments, WhatsApp, events and games.
- Designed a scheduler Lambda that runs every five minutes to book calls, send WhatsApp and push reminders, and update expert status, routing every action through the same API.
- Built ARK-I, the company's WhatsApp assistant, where one stateful gpt-4o model holds the conversation and delegates through function calling to six stateless sub-models that each call one API.
- Built mark8, a real-time call analyst that scored 100 to 500 support calls a day on a 100-point rubric, tagging topics and keeping personas for both sides of each call in MongoDB.

Python • Flask • Node.js • React.js • Next.js • AWS Lambda • API Gateway • MongoDB • SQL • Docker • OpenAI

Inbound Sales Representative Associate · Accenture — Bengaluru, Karnataka, India — December 2025 – Present

PROJECTS

Journeymen · Founder & Full Stack Engineer — July 2026 – Present

journeymen.in • github.com/RamaSai2519/Journeymen

Verifiable, server-backed developer certifications based on real GitHub engineering work rather than resume claims.

- Designed Python and Flask services that use the GitHub API and GitHub OAuth to ingest repositories, commit history and merged pull requests for automated evaluation.
- Integrated OpenAI LLMs with RAG, vector embeddings and semantic search to evaluate code quality and architecture.
- Built the React and Next.js (TypeScript) frontend and deployed the backend serverless on AWS Lambda and API Gateway, with data in MongoDB and PostgreSQL.

Python • Flask • Next.js • TypeScript • AWS Lambda • MongoDB • PostgreSQL • OpenAI • RAG

Emporos · Creator

A Nifty weekly options trading desk on Angel One that records the market every minute, paper-trades 24 strategy books and trades one book with real money.

- Built a risk engine of sixteen ordered, unit-testable rules over an immutable account snapshot, so a live order goes out only when five separate locks agree and every rule passes.
- Reconciles broker orders, fills and positions every 30 seconds and halts new entries on any mismatch; every rejected signal is stored with its full context for audit.
- Runs an async Python trader on EC2, a control API on Lambda, minute-level market data in S3 Parquet, and a Next.js dashboard on Vercel that holds no secrets.

Python • asyncio • AWS EC2 • Lambda • S3 • MongoDB Atlas • Next.js

Ledger

ledger.journeymen.in

A shared expense ledger for a couple or roommates. Bank SMS turns into categorized transactions, budgets track what's left, and every entry shows who logged it.

AWS Lambda • API Gateway • MongoDB Atlas • Firebase FCM

TECHNICAL SKILLS

Languages	Python • JavaScript • TypeScript • SQL
Frontend	React • Next.js • HTML • CSS
Backend	Flask • Node.js • REST APIs • asyncio
Cloud	AWS Lambda • API Gateway • EC2 • S3 • Docker
Databases	MongoDB • PostgreSQL
AI/ML	OpenAI • LLMs • Function Calling • RAG • Vector Embeddings • Semantic Search
Tools	Git • GitHub API • GitHub OAuth
